## 三、 英文翻中文（30%，每題 15 分）

1. Supply Chain Management (SCM) is the management of the flow of goods and services. It includes the movement and storage of raw materials, work-in-process inventory, and finished goods from point of origin to point of consumption. Interconnected or interlinked networks, channels and node businesses are involved in the provision of products and services required by end customers in a supply chain. Supply chain management has been defined as the “design, planning, execution, control, and monitoring of supply chain activities with the objective of creating net value, building a competitive infrastructure, leveraging worldwide logistics, synchronizing supply with demand and measuring performance globally.”
2. The so-called modern logistic management is in the commercial domain, logistics is about distributing raw materials, semi-products, or final products, with relevant information, to the specific location at specific time with the specific item that are assigned by the customers.
